Azizbek Arzikulov

Frontend Engineer (Web)

Product UI delivery that stays coherent as features grow — with strong integration instincts.

- Next.js/React + TypeScript
- i18n / RTL / SEO / SSR
- Streaming & real-time UI
- Integration-heavy delivery

This portfolio includes only work I can explain and defend.

Based in South Korea • Open to roles that can proceed compliantly under current work authorization

Inside

Positioning

How I work (frontend)

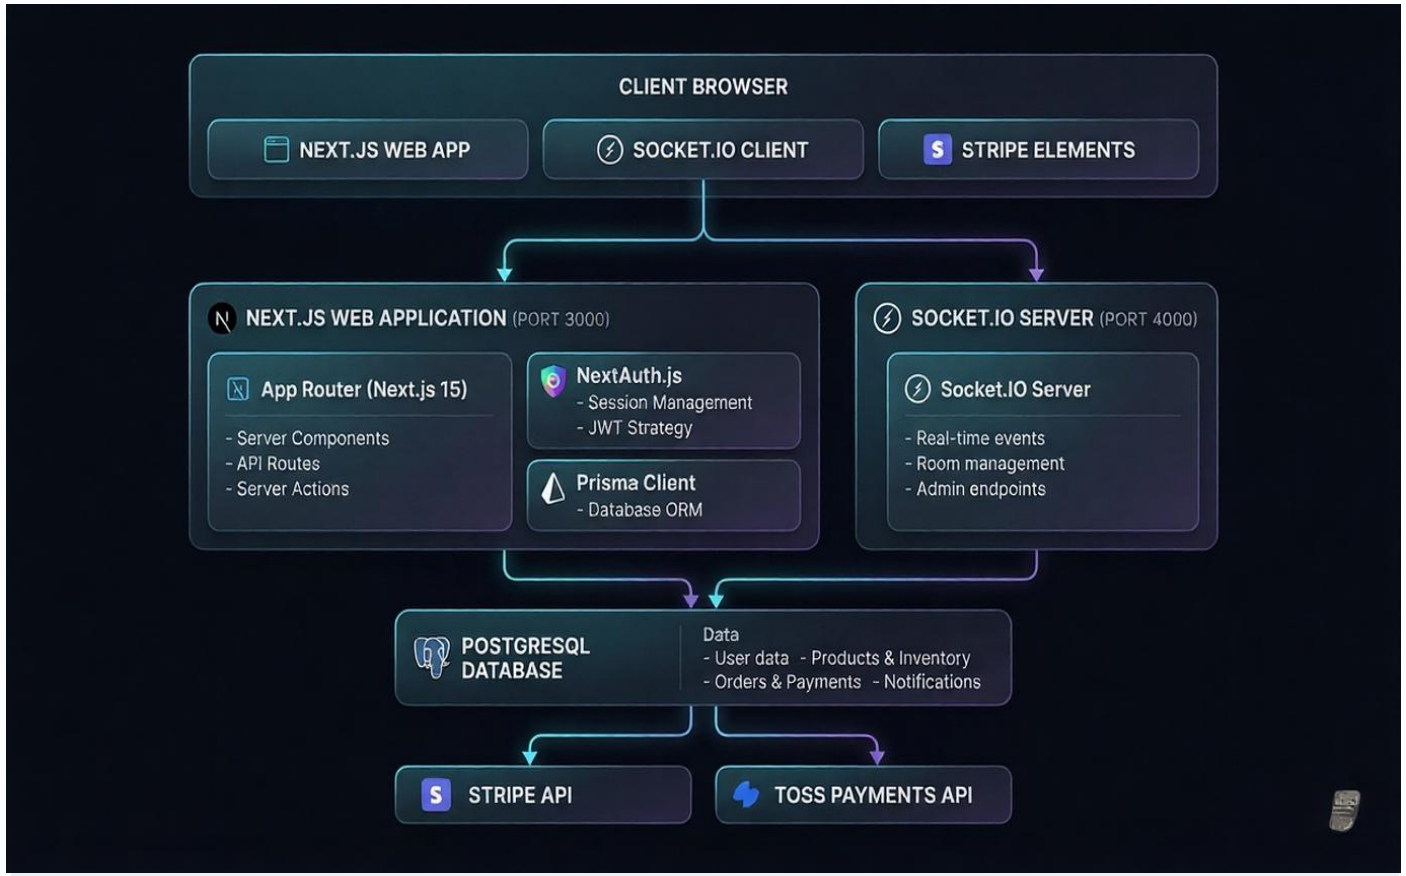
I focus on product outcomes: clear UX, stable UI states, performance, and the integration work that keeps the frontend honest.

Operating principles

- Make UI states explicit (loading/error/empty/permission)
- Treat API contracts as product surface
- Prefer simple, composable component systems
- Measure and improve: performance, accessibility, and reliability

What you get if you hire me

- A frontend engineer who can carry product UI end-to-end, not just implement tickets
- Strong integration instincts — I fix the seams between systems
- Comfortable with multilingual UI and streaming/real-time UX
- Clean, maintainable codebases that scale with features



Project - Trainium

Project 1

Rumi AI

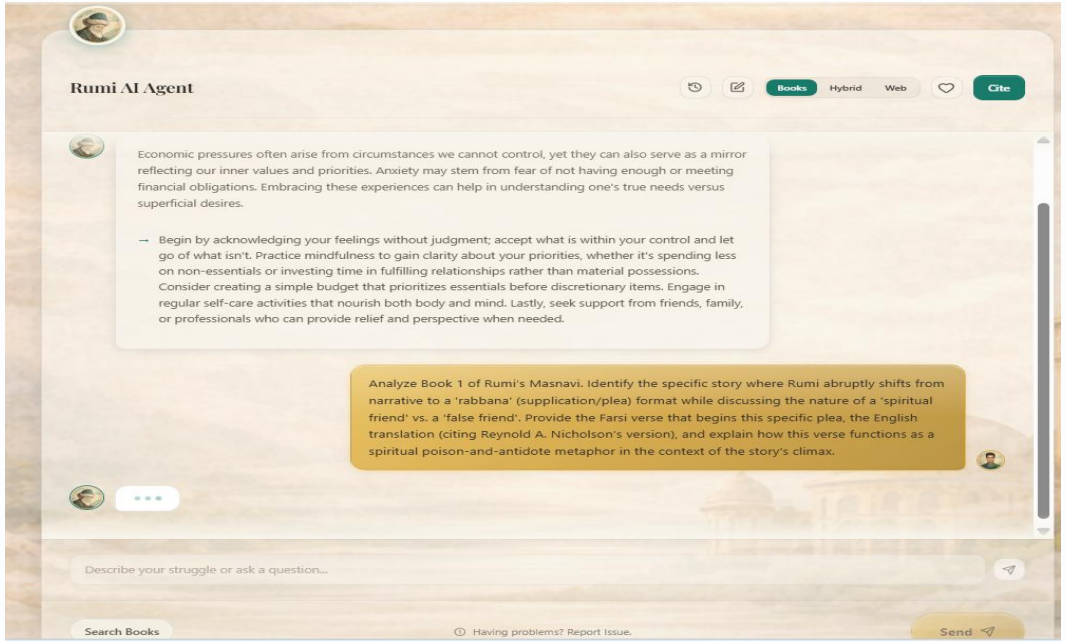
Multilingual/RTL product UI with streaming chat UX and integration-heavy delivery.

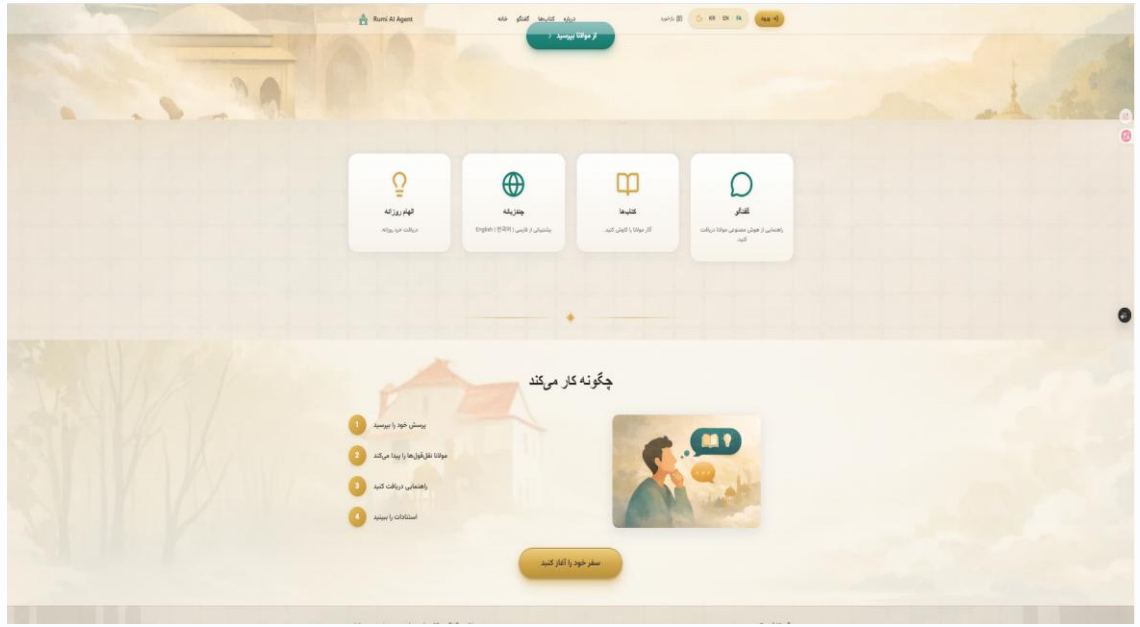
Why this project

Multilingual/RTL product UI with streaming chat UX and integration-heavy delivery.

Tech stack

Next.js • TypeScript • i18n/RTL • SSE • UI state discipline





Project 2

Dr. Niaraki Website

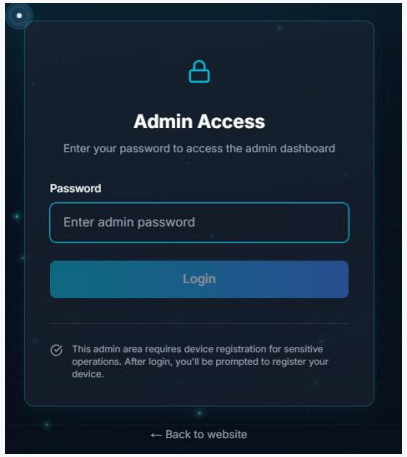
Professional site focused on maintainability and clean UX; full ownership from build to deployment.

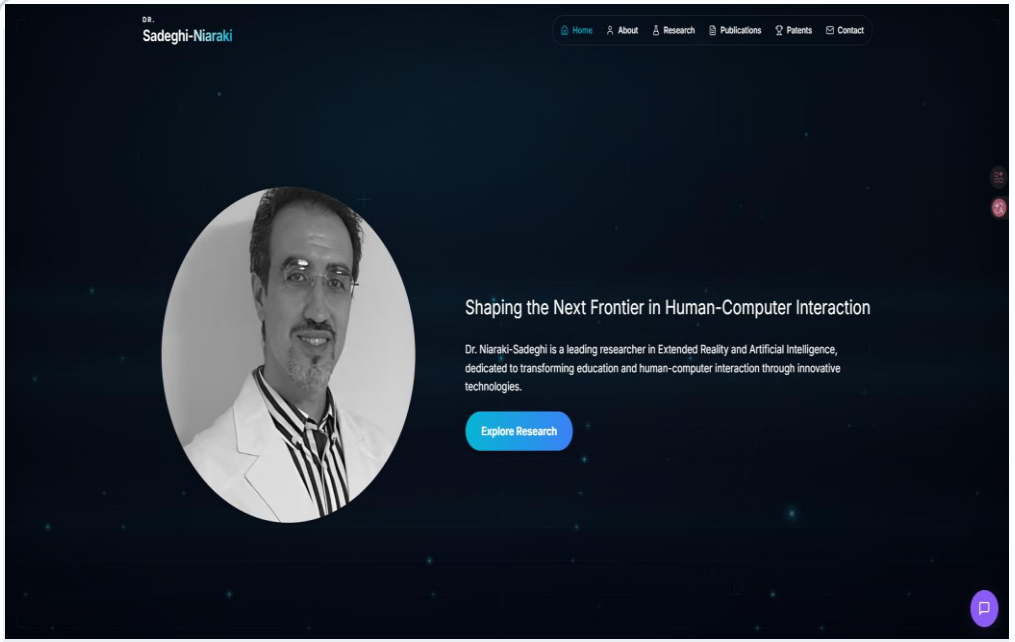
Why this project

Professional site focused on maintainability and clean UX; full ownership from build to deployment.

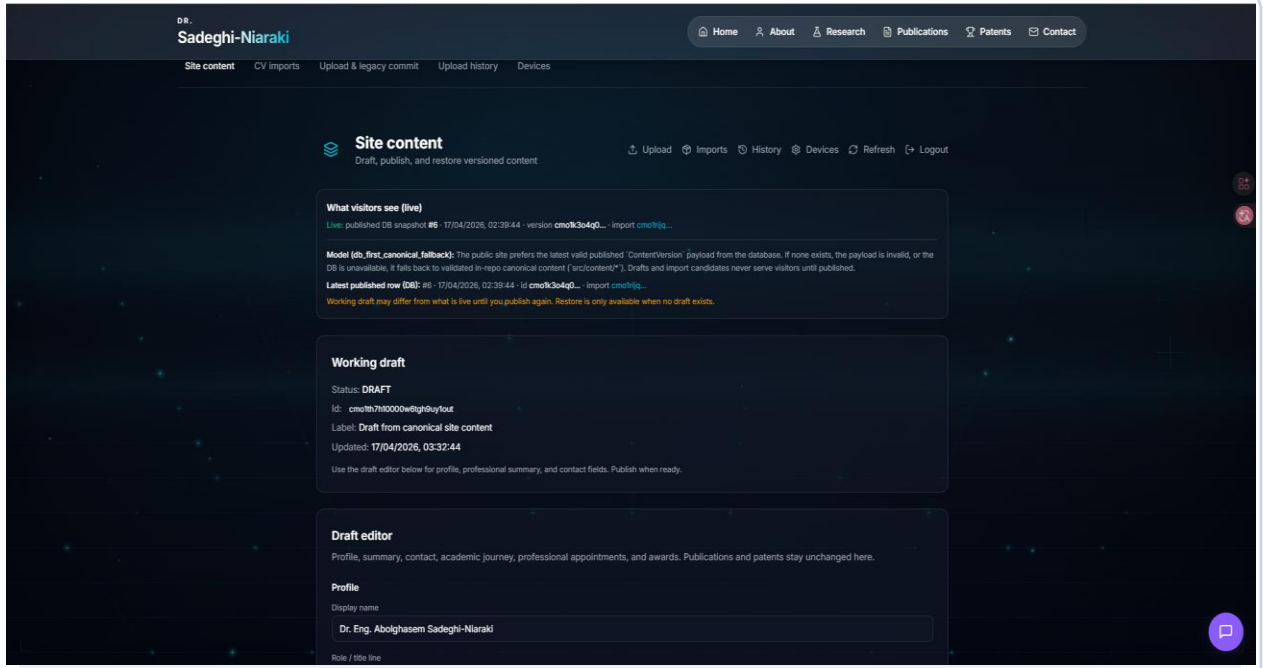
Tech stack

Next.js • TypeScript • Tailwind • content architecture





Public pages sample (home)



Only professor access pages sample (site content)

Project 3

Fishlinic Dashboard

Dashboard that turns real-time signals into understandable, action-oriented views.

Why this project

Dashboard that turns real-time signals into understandable, action-oriented views.

Tech stack

Next.js • data visualization • real-time updates

Project 4

Trainium UI (store + admin)

Multi-surface product UI (auth/admin/checkout) that stays coherent as complexity grows.

Why this project

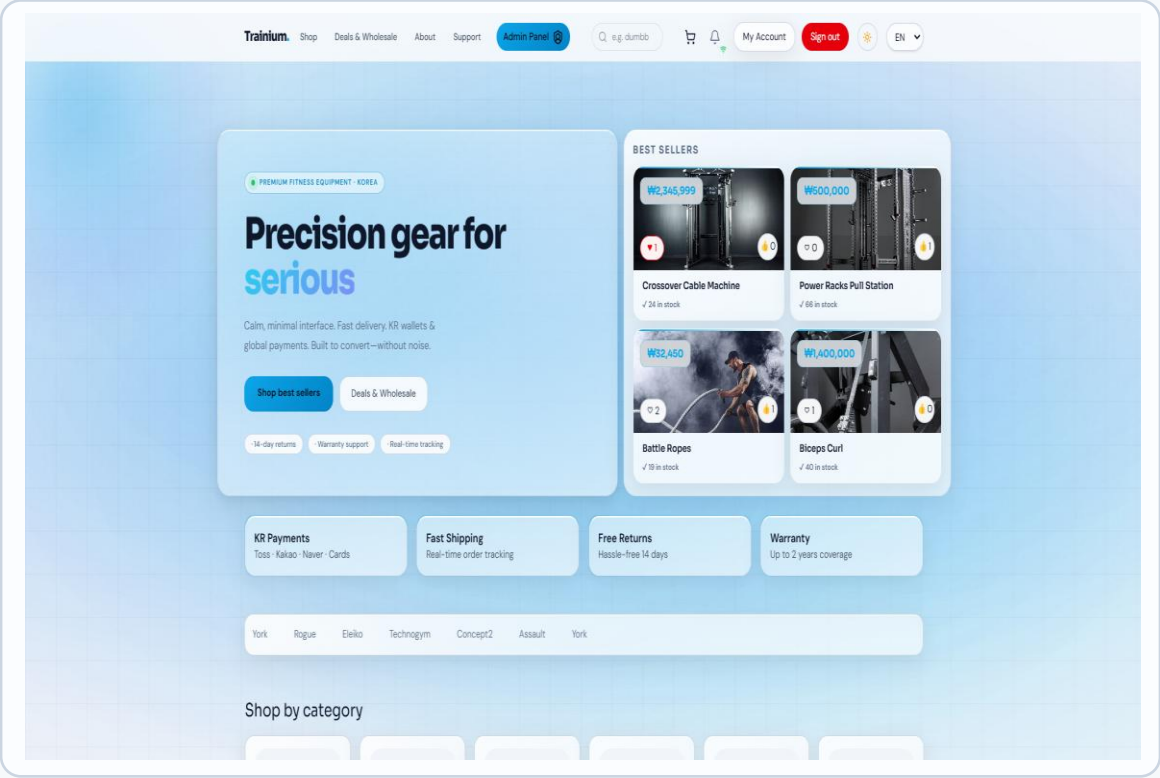
Multi-surface product UI (auth/admin/checkout) that stays coherent as complexity grows.

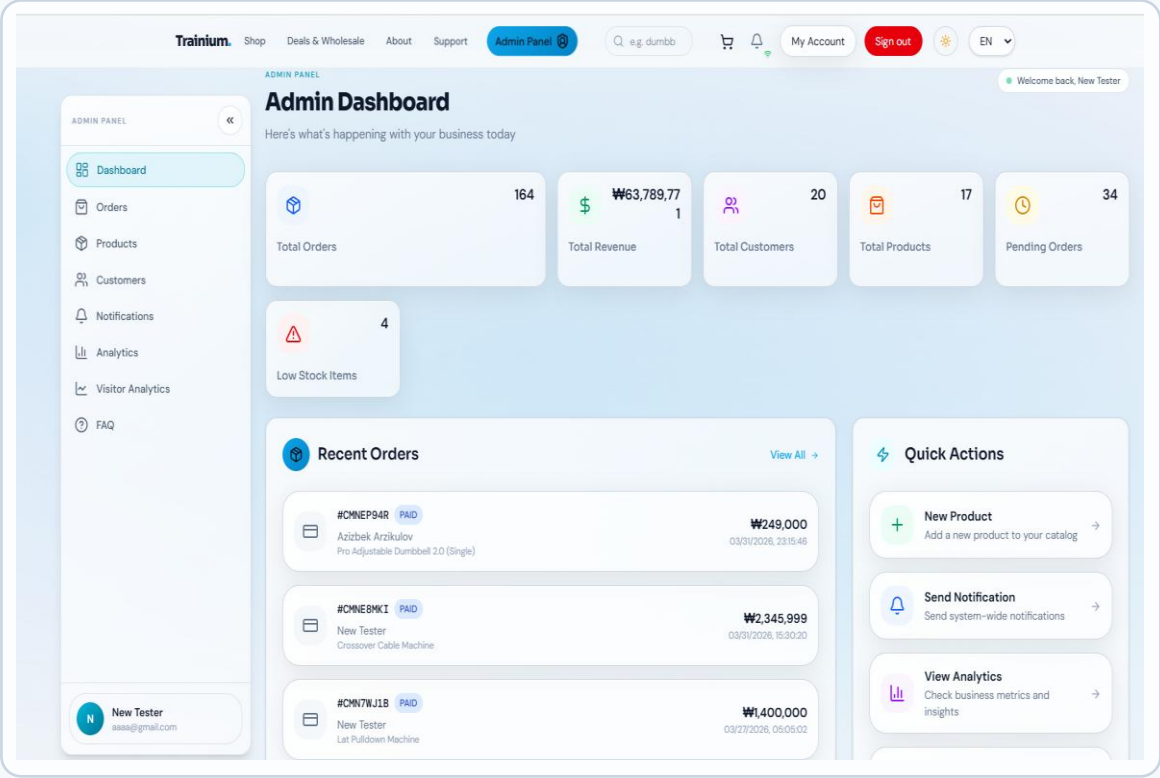
Tech stack

Next.js • TypeScript• UX patterns

Interview-ready talking points

- State/permission/UI consistency
- Fix integration failures at product level
- Balance perf and maintainability





Summary

Skills & strengths in one page

Designed to read fast in document screening: evidence first, adjectives second.

Core stack

- Next.js / React / TypeScript
- Tailwind / UI systems
- i18n (RTL) / SEO / SSR
- Streaming + real-time UI

Strengths (behavior-based)

- Own product UI end-to-end
- Integration-first mindset
- Clear state management
- Performance-conscious delivery

ERD sample

Contact

Clean links, no noise.
